**EASA AD No.: 2008-1058 from 21.08.2008**

Ladies and Gentlemen,

We are glad to inform you that the test campaign already announced one week ago has just recently been successfully completed on Friday, September 26. The test campaign has been joined by representatives of EASA, Eurocontrol and the Swiss air traffic service provider Skyguide.

As a result it can be stated that the implementation and optimization of functions going beyond the certification directives has significantly improved the behavior of our transponders.

After completion of further test analysis activities EASA is expected to prepare a new Airworthiness Directive in the next few days. This AD will supersede the original one from August 2008. Simultaneously we will publish a Service Bulletin that we have agreed upon with EASA. Further information on how to deal with this Service Bulletin will be published on our website soon.

One more time we would like to thank all our customers, business partners, institutions and the press for the pre-dominantly encouraging talks and the appreciation which we even could notice in talks with our competitors.

Further information will be published on our website in the next few days.

Kind regards,  
Funkwerk Avionics GmbH

Michael Frost

Dr. Thomas Wittig
